PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of experience building end-to-end web applications using Java (Spring Boot) and React. Experienced in designing secure backend services, developing RESTful APIs, and delivering responsive frontend interfaces. Strong foundation in enterprise security, microservices architecture, and frontend state management. Proven track record of owning the full development lifecycle - from system design and API development to React UI delivery in cross-functional Agile teams.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend & Frameworks: Spring Boot, Spring Security, Spring AI, Hibernate, JPA

Frontend & Frameworks: React, Next.js, Tailwind CSS, Redux, Axios, React Router

Testing: JUnit, Mockito, WireMock, Test-Driven Development (TDD)

Security: OAuth2, OpenID Connect (OIDC), ADFS, Keycloak, JWT, mTLS, RBAC

Databases: MySQL, PostgreSQL, MongoDB

DevOps & Tools: Git, Maven, Docker, Kafka, CI/CD, GitHub Actions, Ollama, OpenAI Codex, Claude Code

Architecture & Design: Microservices, REST API Design, AI/LLM Integration, HLD, LLD, Agile/Scrum

EXPERIENCE

Tata Technologies

May 2024 – Present

Software Development Engineer

Pune, M.H.

- Designed and developed RESTful APIs for an end-to-end vehicle order lifecycle - creation, allocation, modification, and return, reducing order processing time by ~40% by eliminating manual handoffs across operations teams
- Built a dynamic filtering and search system enabling complex multi-condition queries across fleet order data, cutting average admin query resolution time by over 30%
- Developed React frontend for order management and vehicle status dashboards using JavaScript, shadcn/ui, and React Context - implementing role-aware UI rendering, cookie-based JWT session management, and consistent loading, error, and empty state handling across all views
- Implemented enterprise SSO using OAuth2 and ADFS, securing 6+ microservices with fine-grained role-based access control and reducing unauthorised access incidents by ~25% post-deployment
- Developed REST APIs exposing VIN-specific vehicle notification data across multiple consumer channels and migrated a legacy SOAP-based recall integration to a direct REST API with mutual TLS authentication, cutting latency by ~35% with zero-restart rollback via feature flag
- Built a WireMock-based mock server simulating 4 external enterprise dependencies, reducing CI pipeline failure rate due to external service unavailability by ~80%
- Upgraded platform security by integrating Keycloak JWT authentication, hardening CORS policies, and locking down actuator endpoints - eliminating 3 critical security gaps identified in production review
- Built an end-to-end Excel import/export feature - Spring Boot backend with auto-detection, row-level validation, and atomic rollback, paired with a React UI for drag-and-drop uploads, real-time validation feedback, and one-click export - reducing data onboarding time by ~60%

PROJECTS

FinTrack - Personal Finance Tracker | *Spring Boot, Spring Security, React, Tailwind, Recharts, OpenAI* [GitHub](#)

- Built a full-stack personal finance app with a Spring Boot REST API and React frontend, enabling users to track income and expenses with AI-generated insights and real-time dashboard summaries
- Secured the backend with JWT-based stateless authentication and BCrypt password hashing, with user-level data isolation ensuring each user can only view and modify their own transactions.
- Managed authentication state across the frontend using React Context, with automatic session expiry handling that redirects users to login when their token expires
- Built an interactive finance dashboard using Recharts and OpenAI-powered monthly summaries, displaying category-wise spending breakdown and 6-month income vs expense trends.

EDUCATION

PG Diploma in Advanced Computing - ACTS, CDAC, Pune

Sep. 2023 – March 2024

B.Tech in Computer Science - CSVTU, Bhilai

July 2019 – Aug. 2023
